説明

We have a plugin, where: @MyPluginModelQuery < MyCustomClassQuery < Query@
After redmine update 3.4.4 have a string
<https://github.com/redmine/redmine/commit/fd3c08aaa107e2c5a412a06aea6890b147e46aaf#diff-0fd59f260b10d1cfcf0c5695de8a99e6R90>
where call @Query.get_subclass@
where a condition @subclasses.include? klass@

And if my MyPluginModelQuery not a direct children of Query error raised.

My suggest: improve string https://github.com/redmine/redmine/blob/master/lib/redmine/subclass_factory.rb#L32 for support children's any deep, for example @unless klass < self@
