説明 From github I was kindly suggest to open the issue here too to be addressed properly, not only in github. https://github.com/redmine/redmine/pull/107#issuecomment-405448103 Pull request and files are in the above link. Thanks for your work, redmine rocks!			
journals I don't understand what is the purpose of this. Should we then modify every documentation I made when I teached Redmine courses where I worked (for free)? As far as I know, I received no complaint of any subtasked being referred to "child", but maybe they were abused by their parent task -^ If this is political, I suggest to leave this domain of expertise outside of computing. Let's just code and use applications, and above all focus on the subject of developing a project management tool.
