説明

I have a role that has the @Manage versions@ permission.
It is called "Analista/desenvolvedor".

Then I have a project in which a user is assigned to the role "Analista/desenvolvedor".
And a subproject with the @Inherit members" option checked.

When that user tries to create a new @Version@, the only possible values in @Sharing@ are "None" and "Subprojects".

Then I have another project with similar configuration in which the user +can+ set any value to the @Sharing@ option.

I'm considering this to be a defect because didn't find anything in the docs but the permission @Manage versions@ in roles configuration. Believe other aspects should not interfere.

Environment:

Redmine version	3.4.6.stable
Ruby version	2.3.7-p456 (2018-03-28) [x86_64-linux]
Rails version	4.2.8
Environment	production
Database adapter	Mysql2
