There are some types of trackers (like "Story Blocker" or "Subtask") which makes sense only when it is a subtask.
Please provide additional checkbox "Subtask only" while creating new tracker.
When checked, new item can be created only as a Subtask

journals

Please see the related issue.

My request is related to, but it is not the same as Feature #27988.

In my feature the idea is that some trackers must not be top-level trackers

Kamil, I've closed this ticket as "Duplicate" because you can obtain the same behaviour as you requested in this issue using the patch from #27988.

Thinking now better, you can obtain this behaviour also with the current Redmine versions by making the "Parent task" field mandatory for all roles in the Workflow page (I know that is not a checkbox, but the result is the same). I'm changing the reason from "Duplicate" to "Invalid", please let me know if you consider that something is missing and I'll reopen it.

Marius, why to complicate is so much?

Do you consider your solution as good UX?

Do you refer at the solution with setting the parent task mandatory?

Yes, specifically:
1) Knowing that you have to go to Workflow
2) Field Permissions
3) Select Role "ALL"
4) Select Tracker
5) Click Edit
6) Find "Parent task row"
7) Click and select value "Required" in *each* Issue status
8) Click save

So my point is that your version is not user friendly and doesn't have user intention in mind.

I think that every tool should strive to have better UX, therefore I created this issue

Is not my version, is the current implementation from Redmine which is more flexible than having only a checkbox in the Tracker page.

IMHO, current implementation, plus the feature from #27988 covers this feature request, but I'll reopen this ticket to get more feedback.

Ok, thank you

Attached a patch that adds the possibility to mark a tracker as "Subtask only":

!{width:60%; border: 1px solid grey;}.tracker_subtask.png!

In the workflow, if the user edits a a tracker or multiple trackers which are "Subtask only", the field is marked as mandatory and the option "Required" is not available. If the user edits mixed trackers, the field behaves normally.

!{width:60%; border: 1px solid grey;}.workflow.png!

The field "Parent task" is mandatory when user tries to create an issue with tracker type "Subtask only":

!{width:60%; border: 1px solid grey;}.new_issue.png!

I've updated the patch to apply cleanly on the current trunk and I'm assigning this to version "4.2.0" in order to work on this as early as we can.

Updated again to apply cleanly.

Updated the patch for the latest trunk (r20091).

Is there a possibility to hide the subtask trackers when in added newIssue?? and its appear only when im added subtask??

Moved this to version:"5.0.0" because the changes are quite big.

related_issues

relates,New,27988,Option to configure which trackers can be set as subtasks for each tracker
