説明 Currently I can see no appropriate way of avoiding adding block to any Textile code. Any text enclosed with <code>/n</code> is currently being put to the tag. In php textile it is possible to avoid this by adding a space character in the beginning of the line (see https://txstyle.org/doc/2/paragraphs): a line beginning with a space will be left untouched, and not wrapped in ... tags One of the cases where the issue is important is when using the @ マクロ <code>include</code> の実行中にエラーが発生しました (ページが見つかりません) @ macro. Included pages are still enclosed in tag and this markup is usually wrong, because the included page is usually not a single paragraph, but contains some blocks, headers, etc itself. Currently there is a bug (#13695) in currently used Redcloth3, which makes a workaround for the described issue. When you start the line with some other tag, the remaining text will not be enclosed in a paragraph: @{{include(page)}}@ The same example can be used with the code tag instead of the pre tag which will also work this way. This can be used as a workaround, but since Redmine is slowly moving to RedCloth4 developers must ensure that the new Textile formatter will support not enclosing text blocks into paragraphs. In a quick scan of RedCloth4 doc I can't find a way to do so. Syntax like in php textile can be used for that, where "no-paragraph" is a line started with a space character.
