説明
Redmine in version 3.4.6 don't fully support textile and macros in pdf export/print when custom fields be used formatted text. I did some changes in the issue_pdf_helper.rb to do that.

journals

little optimizations

Thank you for the patch. But I noticed the following points:

- The values should be textilized only when the @text_formatting@ attribute for the custom field is @true@. The patch always textilizes the value

* Inserting a table breaks the layout. Please see the attached pdf (attachment:table-breaks-layout.pdf). Blank lines are inserted after the table

No, the used function show_value() seems to check that. I tried out.

- Inserting a table breaks the layout. Please see the attached pdf (attachment:table-breaks-layout.pdf). Blank lines are inserted after the table

Yes is true. The table cell becomes bigger because the height is calculated over html code in the background. I think it's better to have a big cell and the content fits into, instead a cell that's too small. But I will try to optimize.

Some optimizations for the layout.

For the cell height calculation, some html-strings will be removed.

Further optimizations for issues list ...
