説明 These patches improve thumbnail handling in two aspects: • By changing the naming scheme for thumbnails to not use the attachment ID anymore, already generated thumbnails for identical attachments will be reused. • The second patch adds code to remove any thumbnails when the original attachment file is deleted from disk. Without this patch, thumbnails of deleted attachments are never deleted.			
journals LGTM. We can save disk space with this patch. Setting the target version to 4.1.0. Committed the patches. Thank you for improving Redmine.
