説明

I want feature to add other HTML pages/application within Redmine application and run from the same server. Currently i have moved the application inside "Public" folder in Redmine app. So that i am able to access the same as

"http://redmine_app_link/my_application"

"http://redmine_app_link/my_application/page1"

"http://redmine_app_link/my_application/page2" etc

But this application opens without authentication from Redmine. If I just point to the path it opens without Authentication.

Is there any possibilities to integrate Redmine Authentication to open these web html page in this folder. Or any mechanism/folder where i can move my html app and link inside redmine. Please suggest how to go ahead.

My environment details are as follows

Environment:

Redmine version 3.4.6.stable

Ruby version 2.3.3-p222 (2016-11-21) [i386-mingw32]

Rails version 4.2.8

Environment production

Database adapter Mysql2

SCM:

Subversion 1.10.2

Git 2.17.1

Redmine plugins:

no plugin installed
