**説明**

Clicking on the "Unified diff" link at the bottom of a diff page of a specific revision doesn't work anymore.

For a git revision, it simply produces a "Page not found" error.

Url are like 'https://.../projects/:project\_id/repository/:repository\_id/versions/:rev/diff.diff', the last component is interpreted as a (/path) according to routes.rb (lines 250 and 258)

This was fixed in issue #11325 (revision 9909), but was broken in 4.0.1 again.

journals

By changing to the following, the diff format is allowed.

```
diff --git a/config/routes.rb b/config/routes.rb
index 0344982085..07287f208d 100644
--- a/config/routes.rb
+++ b/config/routes.rb

This change doesn't work when trying to get the diff of a single file of a revision, eg:

/projects/projet-a/repository/svn2/revisions/10/diff/subversion\_test/folder/subfolder/journals\_controller.rb.diff => 404 not found

Fix committed in r17962 by restoring @:format => false@ just like it was in 3.4.

This was changed when upgrading to Rails 5 because @:format => false@ was no longer working as expected, I suspect that a Rails regression was fixed lately.

I've also added some integration tests to make sure that browsing diffs no longer breaks.

Just in case, could anyone confirm this is fixed?

The fix in r17962 caused another problem #31141.

And there is another problem regarding this issue. Although the target version is 4.0.3, the change has not merged to 4.0-stable branch. I am reopening this issue and change the target version to 4.0.4.

Merged to 4.0-stable, thanks for digging into this!
