説明

Updating a time entry:

http://www.redmine.org/projects/redmine/wiki/Rest_TimeEntries#Updating-a-time-entry

results always in a 404

I'm using Redmine 3.4.6.stable and was using:

PUT /time_entries/[id].xml

Other action like:

Creating a time entry

is working.

Also, Delete is not working and I tried it with JSON as a replacement for XML, but with the same response.

Then I removed the extension like this:

/time_entries/[id]

and I got a 422, but the response gives me a full HTML page with:

Invalid form authenticity token.

journals

I'm not a Ruby/Rails developer, but in routes.rb I can see:

```
match '/time_entries/:id', :to => 'timelog#destroy', :via => :delete, :id => / /d+/
```

This is the only entry for: /time_entries/:id so this means that the documentation at:

http://www.redmine.org/projects/redmine/wiki/Rest_TimeEntries#Updating-a-time-entry is outdated and there is no end point for updating a time entry. Is this correct? ----- It works via .json For example, this worked for me: */time_entries/1.json*

```
{ method: 'PUT',
  qs: undefined,
  body:
    { time_entry: { issue_id: '1', hours: 4, spent_on: '2019-01-01' } },
  headers:
    { 'Content-Type': 'application/json',
      'X-Redmine-API-Key': '95228de814b46d8980447c00591460598990d469' },
  json: true }
```

XML also works...

/time_entries/1.xml

```
<?xml version="1.0" ?>
```

```
1
1
2019-02-02
9.0
```

It works via .json

For example, this worked for me:
/time_entries/1.json

[...]

You've tested it with:
Redmine 3.4.6.stable
?

Because I'm still getting 404 error when posting to e.g:
/time_entries/1.json
