説明

This patch provides 2 new tools with a new color palette to change sélection color :

- text color
- background color

journals

The correct issue title should : Formating toolbar : new color tools

Here is the patch, and the 2 new images to put in public/images/jstoolbar/

This patch does not manage the case when we want background an text color at the same time.

!{border: 1px solid}text_color.png!

!{border: 1px solid}text_color_and_background.png!

Here is a new patch managing some mixed cases of color / background color.

Detects if selected text already contains a css tag.

- If tag contains the css we want, replace the color.

* If not, add the css to the other tags.

Fixed previous patch.

Managed more mixed color / background color tags.

@Go thanks to have renamed the issue subject

The patch seems supports only Textile but Markdown. Since Redmine supports both Textile and Markdown, I think the patch should also support Markdown.

Hi, I am going to provide the patch for [Markdown](#)

Now that [%{color:green}Textile](#) is OK%.

Hi, here is a patch to apply after the previous patch.
It includes code refactoring and Markdown support.

For Markdown, html filter must be disabled (C.f. <http://www.redmine.org/boards/2/topics/56096?r=57052#message-57052>).

One remark about responsive design, the tools icons div has no horizontal scrollbar enabled. Thus some icons on the right can disappear with smaller window size.

Thanks Go to have proposed this for the next major release.

Two latest patches don't work without:

       document.selection.createRange().text = subst;
     }

```

Am I missing something? That change have never been mentioned in any of related patches.

Hello, you're right changes to jstoolbar.js were missing.

Here is the full SVN diff for this file.
