On documents module, add/edit/remove attachments is missing when document is edited...

journals

This patch adds features similar to #16410 to the documents.
When editing a document, you can operate (add and bulk delete) the attachments.

!{width:600px;border:1px solid #ccc;}change_editing_document.png!

Sweet! Thanks for sharing the patch. Scheduled without substantive patch review.

NB: I think it would be nice to introduce this functionality similarly for the remaining attachment containers (news and messages) too.

When performing bulk delete, the Attachment's after_commit callback method @Attachment#delete_from_disk@ was not executed.

I fixed a patch.

When performing bulk delete, the Attachment's after_commit callback method @Attachment#delete_from_disk@ was not executed.
I fixed a patch.

I have improved @Document#delete_selected_attachments@.
