説明

Hi,

- In *public/javascripts/application.js* The wiki toolbar preview event is written like this :

```
$('#content').on('click', 'div.jstTabs a.tab-preview', function(event){
```

...

- If we re-write it like this, dynamic added wiki content preview (like the one in modal windows) will work :

```
$('#body').on('click', '#content.scrum div.jstTabs a.tab-preview', function(event){
```

...

journals

Sorry, wrong syntax in description

- original javascript :

```
$('#content').on('click', 'div.jstTabs a.tab-preview', function(event){
```

...

- Enhancement :

```
$('#body').on('click', '#content div.jstTabs a.tab-preview', function(event){
```

...

It is useful in plugins that have dynamic popups like popup windows.

Thanks a lot in advance to study this simple enhancement.
