説明

I have described problem here:

https://stackoverflow.com/questions/59104015/saving-issue-custom-field-values-via-rake-task-in-redmine?noredirect=1#comment104442404_59104015

So, same code works in console on Redmine 4, and on Redmine 3.4 it works well in both console and as rake task.

On Redmine 4, as rake task, it says "saved" but no actual database change occurred.

journals

Eventually I was able to make the following code work with Redmine 4

```
namespace :redmine do
  namespace :myplugin do
    desc 'Updates custom field for idle tickets.'
    task :update_idle => :environment do
      Issue.open.each do |issue|
        begin
          days = DateTime.now.to_time - DateTime.parse(issue.updated_on.to_s).to_time
          days = days/86400
          if days > 0
            issue.custom_values.each do |x|
              if x.custom_field_id == 19
                x.value = days.ceil
                x.save
              end
            end
            issue.save
            true
          end
        end
      end
    end
  end
end
```

But I still think above described behavior is bug...

Could you try again after changing all @save@ method to @save!@ method?

@save!@ throws an exception when it fails. Probably it is useful to troubleshoot this issue.
