説明

Hello,

this affects new created issues from mail and tickets comments coming from mail.

when I send a mail like this:

hello
my
name
is

test

I will get in redmine:

hello
my
name
is

test

this looks like this:

hello
my
name
is

test

this is pretty ugly and space consuming. its like double line breaks. can we not use `<br>` instead of tags?

the preferred structure could be:

```
hello
my
  name
  is
```

test

you get what i mean? only open a new paragraph when there is an empty line between.

tested with mails coming from outlook and from web interface mails.

journals
