説明			
<p>I'm interested in the ability to turn off the distribution of notifications to group members.</p> <p>There are several options for customizing this behavior:</p> <ol style="list-style-type: none"> 1 In the profile settings for each user 2 Customization options for each project 3 Ability to configure for the administrator for all projects. <p>The need to turn off notifications for group members arose due to the fact that some participants in our projects do not want to receive notifications about all tasks assigned to their group. These messages are equal to spam for them. Such participants are interested in reports on tasks in which they are executors or observers, or have previously participated in these tasks.</p> <p>Is it possible to implement this?</p>
