説明

Improved tooltip in Redmine 4.1.0 (#31441) causes a Javascript error on some (self-made) plugin pages using the "title" attribute. This is caused by the absence of the tooltip() function in the "title" attribute. By inserting a judgment statement as follows, errors will not occur.

```

--- a/public/javascripts/application.js
+++ b/public/javascripts/application.js
@@ -998,13 +998,15 @@

$(function () {
-   $('[title]').tooltip({
-     show: {
-       delay: 400
-     },
-     position: {
-       my: "center bottom-5",
-       at: "center top"
-     }
-   });
+   if ($('[title]').tooltip !== undefined) {
+     $('[title]').tooltip({
+       show: {
+         delay: 400
+       },
+       position: {
+         my: "center bottom-5",
+         at: "center top"
+       }
+     });
+   }
});

```

journals

Could you give some examples of plugins that cause the problem?

Try this forked plugin.

<https://github.com/nOne/Redmine-Monitoring-Controlling>

(default branch: redmine4.1)

After installing, click "Monitoring & Controlling" tab, then javascript error will occur.
