説明 Currently, the priority issues filter supports only "is" and "is not" operator. I think the filter will be more useful if it has "<=" (less than), ">=" (larger than), and "between" operators like numeric fields. Use cases: • "Priority", ">=", "Normal" : Lists issues whose priority is normal or higher. It filters out issues with lower priority • "Priority", "between", "High", "Immediate": Lists issues that has higher priority value			
journals			
related_issues relates,New,2973,using smaller then or bigger then to all valid fields
