説明

Hello,

issue as described in the topic.

The Apache keeps crashing with Redmine.pm when RedmineCacheCredsMax is set.

- What infos do you need further? Is there a way to debug this?

System:

Ubuntu 18.04.4 LTS

Perl v5.26.1

#perl -V

Could you paste related errors in the logs of Apache here if you find any?

Sadly there are no logs, even with debug log level.

[Fri Mar 13 10:30:21.540225 2020] [ssl:info] [pid 20705:tid 139956984929216] AH01887: Init: Initializing (virtual) servers for SSL

[Fri Mar 13 10:30:21.543388 2020] [ssl:info] [pid 20705:tid 139956984929216] AH01876: mod_ssl/2.4.29 compiled against Server: Apache/2.4.29, Library: OpenSSL/1.1.1

Then a timeout is reached and the apache start fails.

I have switched the Apache module "mpm_event" to "mpm_prefork" no it works.
