説明

The query filters on issues and related issues accept issue ids. I see several use-cases/benefits of enabling the inline issue subject autocomplete functionality added by #31989 for these fields.

journals

+1

I think we should implement #32168 that allows entering issue ids with "#" prefix to the filters to move this issue forward. This is because issue ids inserted by the auto-complete feature have "#" prefix.

Since "Issues" filter that has been implemented in #4806 does not support an issue id with "#" prefix (@#123@), we should implement #32168 to support the auto-complete in the filter.
