説明

The content added via the "view_layouts_base_body_bottom" Hook is generated outside of any wrapper object. With r18427 the size of the wrapper object is set to 100% of the viewport height. As "view_layouts_base_body_bottom" places content outside of that wrapper, that content is now displayed outside of the viewport. A possible fix could be placing the

```
<%= call_hook :view_layouts_base_body_bottom %>
```

line within the wrapper object like this

```
Powered by <%= link_to Redmine::Info.app_name, Redmine::Info.url %> © 2006-2020 Jean-Philippe Lang
```

```
<%= call_hook :view_layouts_base_body_bottom %>
```

journals

Forgot to mention the file for the possible fix:

```
@app/views/layouts/base.html.erb@
```

I have confirmed that a user has to scroll down to see the content inserted with view_layouts_base_body_bottom as reported by Oliver Köhler.

But I am not sure whether moving the position of view_layouts_base_body_bottom is the best solution because the change makes an inconsistency. The inconsistency is that the view_layouts_base_top is currently placed right after the

, but the view_layouts_base_bottom will no longer be placed right before the after applying the fix.

Maybe fixing this by somehow updating the CSS is better?
