説明 Hello, I would like to know if we have a plugin that creates sub tasks without creating any new issue. We are working on a project where we create issues for customizations. We want to create sub tasks like "Development", "Testing" etc. within the issue in order to assign them to Developers, functional consultant, deployment team etc. I would really appreciate your help. Thanks & Regards Mohit.			
journals You can use Custom Workflow Plugin and Write small Ruby Code to create these items. I use this Feature in our instance
