説明			
ITNOA			
<p>For major projects and organization, simple workflow is not very useful and we need to implement all BPMN capability to our issue tracker and project management system (Redmine). but Redmine workflow engine does not have many features of standard BPMN. So I think if Redmine implement those all features, it can be very more useful for large scale organizations and project.</p> <p>I think for first step Redmine can bring all features from "Jira Workflow engine": https://confluence.atlassian.com/adminjiracloud/working-with-workflows-776636540.html</p> <p>The important features is like below</p> <p>Conditional transition</p> <p>Conditional custom field</p> <p>post function (Web Hook)</p> <p>Visualizer</p> <p>Team Concept</p>
