説明 Users often ask for per-project issue ID's there are even plugins like: http://blog.andriylesyuk.com/sequent-issue-numbers-with-the-project-key/ and issues like: https://www.redmine.org/issues/5765 Connected with many other re-occurring issues. So the main reason for those is that users don't like to see sequential numbers for issues/tasks it generates all kind of noise in their brains, I don't want to write examples... My proposal is to use UUID like styles for Issue ID, and Rails 6 is allowing that... For example: https://pawelurbanek.com/uuid-order-rails Perhaps somebody is willing to work on some kind or patch. Best Regards. journals By re-occurring issues I mean, people keep asking for the same feature...
