説明

Currently, only the latest note can be output as CSV, but I think that many people need all the notes. Plugins for that are also being developed. https://github.com/suer/redmine_export_with_journals

journals

In order to implement this feature, we need to think about how to include notes in CSV.

My idea:

.#.	Tracker	_.Status_.	Priority	_.Subject_	Assignee	_.Updated_	Note-#	_.Notes
3	Bug	New	Normal	Private issue on public project		09/08/2020 01:40 PM		
3							1	test1
3							2	test2
3							3	* test3
2	Bug	New	Low	Subproject issue two		09/01/2020 11:27 AM		1 Bug New
	Low	Cannot print recipes		User name		09/02/2020 11:27 AM		1
1	The quick brown fox jumps over the lazy dog							2 Some

notes with Redmine links: #2, r2. |

I've added a column called Note- # to make note sorting work.

For a issue with the same id: 3, there are 4 lines with 1 line of ticket information + 3 lines of notes.

3							1	test1

I think an additional column that represents the user who wrote the note (stored as @journals.user_id@) is necessary.

And it is better to have @journals.created_on@ and @journals.private_notes@.

I have created a draft patch for people to try out this feature. I have not written any tests.

If you output CSV from issues list and check "All notes" checkbox, notes related information will be added to CSV.

"All notes" checkbox is available only for CSV output.

Feedback is very welcome!

I'm attaching a patch that improves draft.patch.

Once this feature is implemented, it will be possible to easily retrieve note information without using the API.

I attached is a sample csv that outputs the issues and journal notes created by @rake db:fixtures@.
