説明 When the form contains invalid field values, the class "error" is added only to standard fields. We should add it also to custom fields in order to be able to highlight those fields (#32764). The attached patch fixes this.			
journals All tests pass: https://gitlab.com/redmine-org/redmine/-/pipelines/239464521			
Committed as a part of #32764. Thank you. We should keep this in Changelog because there were some changes regarding how the validation messages are stored in the object.			
related_issues relates,Closed,32764,Make form validation errors more obvious for users
