説明

Syntax highlighting in redmine only supports one parameter @class="{language}"@.

Rouge actually has additional parameters to control e.g. the highlighting of single or multiple lines.

Source: <https://github.com/rouge-ruby/rouge#formatters>

Rouge::Formatters::HTMLineHighlighter.new(formatter, highlight_lines: [3, 5]) will split your code into lines and wrap them in a span with a class name specified by the highlight_line_class option (default is 'rouge').

Can the redmine be extended to support these parameters?

Best regards
