## 説明

Here is a part of the console output when upgrading Redmine to version 4.2.0:

```
E:/data/redmine>bundle install --without test development
[DEPRECATED] The `--without` flag is deprecated because it relies on being remembered across bundler invocations,
bundler will no longer do in future versions.
Instead please use `bundle config set without 'test development'`, and stop using this flag
[DEPRECATED] Your Gemfile contains multiple primary sources. Using `source` more than once without a block is
k, and may result in installing unexpected gems.
To resolve this warning, use a block to indicate which gems should come from the secondary source.
To upgrade this warning to an error, run `bundle config set disable_multisource true`.
Your Gemfile lists the gem rake (>= 0) more than once.
You should probably keep only one of them.
Remove any duplicate entries and specify the gem only once.
While it's not a problem now, it could cause errors if you change the version of one of them later.
```

Especially this part:

```
[DEPRECATED] Your Gemfile contains multiple primary sources. Using source more than once without a block is a
and may result in installing unexpected gems.
To resolve this warning, use a block to indicate which gems should come from the secondary source.

Is it something dangerous? I am not a ruby on rails programmer and cannot tell...
```

journals

Thanks Ivan for reporting the issue.

Regarding second deprecation (Gemfile multiplesources), are you using any plugins or a local Gemfile (@Gemfile.local@)?

For the first one, I'll investigate, but being just a deprecation, you should not be worry for now.

1/ this should be just a documentation change in Redmine Installation Guide.  
2/ Your Gemfile contains multiple primary sources:

```
Gemfile
source 'https://rubygems.org' # primary source
gem "..."
```

```
gem "..."
```

```
Gemfile.local
```

```
source 'https://rubygems.org' # remove this line
```

```
gem "..."
```

```
gem "..."
```

or alternatively

```
Gemfile
```

```
source 'https://rubygems.org' do
```

```
gem "..."
```

```
gem "..."
```

```
Gemfile.local
```

```
source 'https://rubygems.org' do # use a block
```

```
  gem "..."
```

```
  gem "..."
```

```
end
```

but this is mainly up to plugin maintainers or your Gemfile.local which isn't part of the Redmine source.

I do not worry about the first deprecation.

For the second one, it seems I have some plugin that is the cause. My Gemfile.local is simply nothing:

```
# gem "thin"
```

```
# gem "puma"
```

... Yes, I found

```
source https://rubygems.org'
```

in plugin @additional@. I will try to remove this line in the plugin's Gemfile.
