説明 I'd like to know if there is interest in a feature like this:  journals Here's a dirty and untested patch against current trunk @ r21131 that implements this. Some notes and warnings on the patch: - used argument is currently @true/false@, while in e.g. activity @1/0@ is used - argument handling is sub-optimal at best @style="margin-bottom: 1.4em;"@ is currently hard-coded in the @_options_form.html.erb@ partial - sub-project parameter support is implemented for categories block, while the block itself doesn't support rendering of sub-project data (see #35664) - contains no tests, doesn't modify existing tests and might break existing tests * contains some duplication			
related_issues relates,New,35666,Review incorrect usage of Setting.display_subprojects_issues relates,Closed,2529,Extend Issue Summary to include subprojects relates,Closed,34185,Trackers of subprojects are not displayed in the Issue summary page
