説明

If an image is included in an issue (or wiki page) and attributes are used for height and width, this causes an infinite loop on PDF export.

Here is an example:

```
!{height: 501px; width: 916px;}20220110-091538-244.png!
```

This looks like this is a bug in "rbpdf":<https://github.com/naitoh/rbpdf>, which can be related with <https://github.com/naitoh/rbpdf/issues/62>

Tested with:

- Redmine 4.2.3 and Redmine trunk
- Ruby 2.7.5

journals

The image does not even exist, just this line above is enough to run in an infinite loop on PDF export. No plugins are installed with my tests.
