**説明**

Before redmine v4.1 the /projects.xml API returned active and closed projects. With v4.1 and upwards only active projects are returned and there isn't an option to include them (as far as I can read from the corresponding src file).

It seems the change happened with this commit:

<https://github.com/redmine/redmine/commit/6c5440a21b491982c02531c82b4416ef212eb3dc>

**journals**

I have described three ways to get information about status closed (id: 5). Could you please try with this?

- Save a custom query configured to include the closed project and set its query. @http:///projects?query\_id=&key=@
- @http:///projects.xml?f[]=status&op[status]==&v[status][]=1&v[status][]=5&key=@
- @http:///projects.xml?status=5&key=@ results(closed projects) + @http:///projects.xml?status=1&key=@ results(open projects)

There is a workaround, but I think the problem that the document([[Rest\_Projects]]) is not updated even though the specifications of the project API have changed significantly needs to be improved.

- Add a method for adding filter conditions

\* Add a description that previously included projects that were closed by default, but are no longer included

Using

https:///projects.xml?f[]=status&op[status]==&v[status][]=1&v[status][]=5&key=

works. Thank you!
