説明

Hello,

context-menu on right click on roadmap's or issues's page can be display in wrong place on Firefox browser (no problem on Chrome).

It's just because the div context-menu is append on content's div

On context-menu.js

```
document.getElementById("content").appendChild(menu);
```

need to be change. For example :

```
document.getElementById("footer").parentElement.appendChild(menu);
```

But it's need to be append to a full page DIV.

Thanks

journals

It's linked to the theme used (we use PurpleMine)

And they add this code :

```
// Fix issue with context menu position
if (this.$main.css('position') === 'relative') {
    $(window).on('load', function () {
        $('#context-menu').appendTo('#wrapper3')
    })
}
```

It's work on Chrome but not on Firefox.

I have also seen in the past how the context menu was misplaced.

I just opened the roadmap page and the issues page in Firefox to see how it works, and I was able to open them in the context menu without any problems. Do you know of any other conditions that might reproduce the problem?

Since I don't know the conditions under which the problem occurs, I can't confirm that the code works.

Could be related to "Graphical bug with redmine 4.2.3":<https://github.com/mrliptontea/PurpleMine2/issues/242> ?

We use PurpleMine2 with redmine 4.1.X and couldn't reproduce the error.

Yes i think it's related to this bug (i'm on redmine 4.2.4)
