Using the default queue adapter (@:async@) in production is not recommended because the queue is stored in memory and you can easily lose the items from the queue (https://api.rubyonrails.org/classes/ActiveJob/QueueAdapters/AsyncAdapter.html).

Since #26791, there were multiple issues reported caused by the default queue adapter (for example: #31241).

My proposal is to add the following check in Redmine information page:

!{border: 1px solid grey;}.redmine_info.png!

journals

Maybe the following translation is better: "Default queue adapter changed (is well suited only for dev/test)".
